

# Conic-Flow® Silencer Type: NS

With Forward and Reverse Flow Ratings

### Supplied as Standard

- Aerodynamic inlet cones to reduce pressure drop and conserve energy
- Perforated galvanised steel facings to all acoustic elements to protect acoustic media from damage and erosion

### Designating Silencers: Example

Model: 300-NS-1000

Pipe Diameter	Type	Length
300mm	NS	1000mm

**Options:** Energy saver tail cone provides a significant decrease in pressure drop, resulting in a 33% decrease in silencer energy consumption, with no effect on the silencer acoustic characteristics. See page 46 for additional information.

## Dynamic Insertion Loss (DIL) Ratings: Forward (+) / Reverse (-) Flow

IAC NS Model (pipe diameter in mm)	Octave Band	1	2	3	4	5	6	7	8
	Hz	63	125	250	500	1K	2K	4K	8K

### Note

- The tabulated air flow in m<sup>3</sup>/s is based upon tests in the IAC Acoustics R&D Laboratory, in accordance with applicable sections of internationally recognised airflow test codes. These codes require specific lengths of straight duct both upstream and downstream of the test specimen. Non-compliance with these codes can add from 0.5 to several velocity heads depending on specific conditions. The downstream measurements are made far enough downstream to include static regain. Therefore, if silencers are installed immediately before or after elbows, transitions or at the intake or discharge of the system, sufficient allowance to compensate for these factors must be included when calculating the operating static pressure loss through the silencer. See pages 10 and 11 for further details.
- Face Velocity is the airflow (m<sup>3</sup>/s) divided by the Face Area (m<sup>2</sup>)
- Pressure drop for any face velocity can be calculated from the equation: PD=(Actual FV/catalogue FV)<sup>2</sup> x (Catalogue PD)
- Other diameters and lengths are available, please contact IAC with your specific requirements.
